LEWIS, PATRICK T

ART UNIT

PAPER NUMBER

1623

DATE MAILED: 09/09/2003

13

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/916,369

Applicant(s)

DELLINGER ET AL.

Examiner

Patrick T. Lewis

Art Unit

1623

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 09 June 2003.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) 12-25 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-11 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

**Priority under 35 U.S.C. §§ 119 and 120**

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☒ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)                      4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)                      5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_                      6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of Group I (claims 1-11) in Paper No. 12 dated June 9, 2003 is acknowledged.
2. Claims 12-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 12 dated June 9, 2003.

### *Claim Rejections - 35 USC § 112*

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-5 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "a composition which concurrently oxidizes the phosphite formed in step (a) to a phosphate and deprotects the protected hydroxyl of the second nucleoside" is not adequately described by the claims. The skilled artisan would not be fully apprised of the metes and bounds of the instant method, as applicant has failed to set forth the critical components of said composition which promotes the concurrent oxidation of the phosphite and the deprotection of the hydroxyl group.

***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Dellinger et al. U.S. Patent 6,222,030 (Dellinger), Cramer et al. U.S. Patent 6,376,246 (Cramer), and Manoharan et al. U.S. Patent 6,207,819 (Manoharan).

Claims 1-11 are drawn to a method of synthesizing a polynucleotide, comprising (a) coupling a second nucleoside to a first nucleoside through a phosphite linkage, wherein the second nucleoside has a non-carbonate protecting group protecting a hydroxyl; and (b) exposing the product of step (a) to a composition which concurrently oxidizes the phosphite formed in step (a) to a phosphate and deprotects the protected hydroxyl or the second nucleoside.

Dellinger teaches a method for synthesizing oligonucleotides using carbonate protection of hydroxyl groups and nucleophilic deprotection reagents (Abstract; column 4, lines 16-55). The deprotection reagents irreversibly cleave the carbonate protecting groups while simultaneously oxidizing the internucleotide phosphite triester linkage, and can be used in aqueous solution at neutral to mildly basic pH. The invention is premised on the discovery that rapid and selective removal of suitable 5'-OH or 3'-OH protecting groups following phosphoramidite condensation can be achieved by employing nucleophiles, and particularly peroxy anion, that exhibit an "alpha effect" under neutral or mildly basic conditions. In a preferred embodiment, the nucleophilic deprotection reagent that exhibits an alpha effect is a peroxide or a mixture of peroxides (column 11, lines 43-67; column 12, lines 1-24). The peroxide may be either inorganic or organic. Suitable inorganic peroxides include those of the formula  $M+OOH^-$ , where M is any counteranion, including  $H^+$ ,  $Li^+$ ,  $Na^+$ ,  $K^+$ ,  $Rb^+$ ,  $Cs^+$ , or the like. Suitable organic peroxides include those of the formula  $ROOH$ , where R is selected from the group consisting of alkyl, aryl, substituted alkyl and substituted aryl. More particularly, the organic peroxide will have one of the general structures (V), (VI), or (VII). The two-

Art Unit: 1623

step process of coupling and deprotection/oxidation is repeated until the oligonucleotide having the desired sequence and length is obtained (column 14, lines 52-56).

Dellinger differs from the instantly claimed method in that Dellinger: 1) does not teach the use of non-carbonate protecting groups; 2) does not teach the deprotection/oxidation step in non-aqueous solutions; and 3) does not teach composition comprising an acid for the removal of the non-carbonate protecting group. However, these deficiencies would have been obvious to the skilled artisan at the time of the invention when viewed in combination with Crameri and Manoharan.

Crameri teaches that codon-varied oligonucleotides are synthesized employing phosphoramidite solid-phase chemical synthesis in which the 3' ends of nucleic acid substrate sequences are covalently attached to a solid support, e.g., control pore glass (column 16, lines 59-67; column 17, lines 1-8). The 5' protecting groups can be a triphenylmethyl group, such as dimethoxyltrityl (DMT); a carbonyl-containing group, such as Fmoc or levulinoyl; an acid-clearable group, such as pixyl; or a fluoride-cleavable alkylsilyl group, such as t-butyl dimethyl silyl (TBDMS), triisopropyl silyl, or trimethylsilyl.

Manoharan teaches methods for the preparation of mixed backbone oligomeric compounds (oligonucleotides). The method comprises coupling a first and a second nucleoside wherein said second nucleoside contains a 5'-OH protecting group. Next, the extended compound is treated with an oxidizing solution. A wide variety of hydroxy protecting groups can be employed in the methods of the invention (column 11, lines 49-67; column 12, lines 1-2). Preferably, the protecting group is stable under either

Art Unit: 1623

acidic or basic conditions. Preferred protecting groups include dimethoxytrityl (DMT), monomethoxytrityl (MMT), 9-phenylxanthen-9-yl (Pixyl) and 9-(p-methoxyphenyl)xanthen-9-yl (Mox). Useful oxidizing agents include iodine/tetrahydrofuran/water pyridine, hydrogen peroxide/water, tert-butyl hydroperoxide or any peracid like m-chlorobenzoic acid (column 12, lines 57-65). The oxidizing solution generally has from about 18% to about 45% oxidizing agent, from about 2% to about 15% water [applicant defines a solutions as being substantially anhydrous when the solution is less than 5% water (page 25, lines 14-35)], from about 40% to about 80% aprotic organic solvent, from about 0.01 M to about 0.8 M base dissolved in the aprotic organic solvent (column 14, lines 1-15).

It would have been obvious to one of ordinary skill in the art at the time of the invention to produce a polynucleotide, comprising (a) coupling a second nucleoside to a first nucleoside through a phosphite linkage, wherein the second nucleoside has a non-carbonate protecting group protecting a hydroxyl; and (b) exposing the product of step (a) to a composition which concurrently oxidizes the phosphite formed in step (a) to a phosphate and deprotects the protected hydroxyl or the second nucleoside. The selection of a known material based on its suitability for its intended use is *prima facie* obvious. *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945). In the instant case, although the method of Dellinger is limited to the use of carbonate protecting groups, Crameri teaches the suitability of both carbonate and non-carbonate protecting groups in oligonucleotide synthesis. The selection of an appropriate protecting group compatible with pendant functional groups and

Art Unit: 1623

downstream reaction conditions is well within the purview of the skilled artisan. It would have also been obvious to the skilled artisan to employ a peroxide such as hydrogen peroxide or t-butyl hydroperoxide or any acid like m-chlorbenzoic acid to oxidize the phosphite internucleoside linkages as taught by Manoharan. Since compounds and their properties are inseparable, the protecting groups would also be removed during oxidation. One of ordinary skill in the art would have been motivated to do so in order to reduce the number of methodological steps.

### ***Conclusion***

9. Claims 1-25 are pending. Claims 1-11 are rejected. Claims 12-25 are withdrawn from consideration as being drawn to a non-elected invention. No claims are allowed.

***Contacts***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick T. Lewis whose telephone number is 703-305-4043. The examiner can normally be reached on M-F 10:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James O. Wilson can be reached on 703-308-4624. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
